WORKING WITH CURSOR,PROCEDURES AND FUNCTION

Program 1

FACTORIAL OF A NUMBER USING FUNCTION

```
CREATE OR REPLACE FUNCTION itfact (a NUMBER) RETURN NUMBER IS fact NUMBER
   := 1; b NUMBER;
BEGIN b
   := a;
   WHILE b > 0 LOOP fact
     := fact * b; b
     := b - 1;
   END LOOP;
   RETURN fact;
END;
/
```

```
Function created.
```

```
DECLARE result NUMBER;
BEGIN
   result := itfact(7); -- Call the function with 7 as input
   DBMS_OUTPUT.PUT_LINE('The factorial of 7 is ' || result); END;
/
```

```
The factorial of 7 is 5040

Statement processed.
```

Program 2

Write a PL/SQL program using Procedures IN,INOUT,OUT parameters to retrieve the corresponding book information in library

-- Create a simple table for the library books

```
CREATE   TABLE   library   (   book_id   INT
  PRIMARY          KEY,         book_name
  VARCHAR2(100),                author_name
  VARCHAR2(100)
);
```

-- Sample data insertion

INSERT INTO library VALUES (1, 'Introduction to PL/SQL', 'John Doe'); INSERT INTO library VALUES (2, 'Advanced SQL', 'Jane Smith');

-- Procedure to retrieve book information

```
CREATE OR REPLACE PROCEDURE get_book_info ( p_book_id
   IN INT, p_book_name IN OUT
   VARCHAR2, p_author_name OUT VARCHAR2
) IS
BEGIN
   -- Retrieve book information based on the book_id
   SELECT book_name, author_name
   INTO p_book_name, p_author_name
   FROM library
   WHERE book_id = p_book_id;

   -- Modify book_name if needed (optional, based on INOUT) p_book_name
:= p_book_name || ' - Updated'; END;
/
```

-- Test the procedure

```
DECLARE v_book_name
   VARCHAR2(100); v_author_name
```

```
    VARCHAR2(100);
BEGIN
    v_book_name := 'Sample Book'; -- Initial value
    get_book_info(1, v_book_name, v_author_name); -- Fetch book info for ID 1
    DBMS_OUTPUT.PUT_LINE('Book Name: ' || v_book_name); -- Output modified book name
    DBMS_OUTPUT.PUT_LINE('Author Name: ' || v_author_name); -- Output author name
END;

/
```

```
Book Name: Introduction to PL/SQL - Updated
Author Name: John Doe

Statement processed.
```
